NodeJS Backend Developer | 4+ Years Experience | Scalable Systems | Microservices | Cloud (AWS & Azure)

About Me

Results-driven Backend Developer with 4+ years of experience building scalable, high-performance applications using Node.js and Express. Proven expertise in designing RESTful APIs, microservices architecture, and database optimization. Experienced in delivering production-grade systems with offline capabilities, real-time integrations, and secure authentication. Strong collaborator in Agile environments, focused on performance, scalability, and business impact.

Work Experience

Eazy Erp Technology Pvt. Ltd. (**08 May 2023 – Present**)

1) Project Name**: Retail Eazy (April-2023 to present)**
   - Built and maintained **50+ RESTful APIs** using Node.js (Express) for order management, billing, and invoicing.
   - Developed **offline-first mobile features** with manual sync, improving usability in low-network areas.
   - Designed **Loyalty & Promotion Systems**, increasing retailer engagement and repeat usage.
   - Integrated **Distributor Management System (DMS)** for real-time synchronization of orders and inventory.
   - Implemented **JWT-based authentication**, ensuring secure access control.
   - Optimized database queries and indexing, improving API response time by **30%**.
   - Integrated **Firebase notifications & email services** for real-time communication.
   - Managed data using **PostgreSQL & Oracle Cloud**, ensuring high availability.
2) Project Name***: Eazy Cockpit (Sept.-2024 to present)***
   - Designed a **scalable multi-tenant configuration platform** supporting multiple enterprise applications.
   - Built **RBAC-based authentication system** supporting multiple user roles and permissions.
   - Developed **dynamic workflow engine**, reducing dependency on code deployments.
   - Implemented **bulk Excel processing system** handling large datasets with background jobs.
   - Created **real-time dashboards using Bold-BI**, improving operational visibility.
   - Enabled **multi-project configuration management**, reducing deployment errors by **40%**.

Sosimtech Solution - (**01 Feb 2022 – 30 April 2023**)

1) Project Name*:* **The Watts (Feb-2022 to April-2023)**
   - Developed and tested backend APIs for managing operator-specific roles and workflows in a Node.js environment.
   - Maintained and optimized a comprehensive inventory management system for electronic items.
   - Played a key role in the development of internal systems for one of India's largest electronics companies.
   - Ensured data integrity and optimized performance using PostgreSQL and Sequelize ORM.
   - Collaborated with cross-functional teams to deliver scalable and efficient backend solutions.

Technical Skills

Languages: JavaScript
Backend: Node.js, Express.js
Frontend: React.js, React Native
Databases: PostgreSQL, MongoDB, MySQL, Oracle Cloud
ORMs: Sequelize
Cloud & DevOps: AWS (EC2, S3), Azure Blob Storage, Docker, PM2
Tools: GitHub, Postman, Swagger, VS Code
Testing: Cypress
Other: REST APIs, Microservices, JWT Auth, System Design

Education

- **MCA-2021**
  Madhav Institute of Technology and Science, Gwalior, Madhya Pradesh, India
- **BSC-2018**
  Govt. Shrimant Madhavrao Scindia Adarsh Science College, Gwalior, Madhya Pradesh, India

Career Gap (2018-2019)

Prepared for competitive entrance exams, developing strong analytical, problem-solving, and self-learning skills.

Interest & Hobbies

Interests include traveling, creative sketching, staying physically active through gym workouts, building side coding projects, discovering new experiences, and engaging in indoor and outdoor sports.
